

Fundstrat Granny Shots US Large Cap ETF

GRNY

INVESTMENT APPROACH

The Fundstrat Granny Shots U.S. Large Cap ETF seeks long-term capital appreciation by investing primarily in U.S. large-cap companies, generally those within the top 85% of the U.S. equity market by market capitalization (greater than \$25.1 billion as of January 30, 2026).

Securities are chosen for the Fund through top-down fundamental analyses and quantitative screening processes. Through analysis of broad research areas, themes are identified within the research areas. Once a theme is identified, top-down fundamental analyses are conducted to recognize individual companies that could benefit from the identified theme. Individual companies are then quantitatively screened. For a stock to appear in the Fund portfolio, it must appear in two or more themes. Qualifying stocks are then given equal weighting in the final portfolio.

The Fund portfolio will hold approximately 20 to 50 positions and generally represent 5 to 10 themes.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Fund, please call (212) 293-7132 or visit our website at www.grannyshots.com. Read the prospectus or summary prospectus carefully before investing.

Models and Data Risk. The composition of the Fund's portfolio is heavily dependent on investment models developed by the Sub-Adviser as well as information and data supplied by third parties ("Models and Data").

New Fund Risk. The Fund is a recently organized management investment company with no operating history. As a result, prospective investors do not have a track record or history on which to base their investment decisions.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers.
